SKILLS

-
- C++ – Advance coding skill in this language with hands-on experience on projects.
 - Python – Done projects in this language and can-do competitive coding.
 - SQL – Experience of writing queries using SQL.
 - Excel - Proficient in data manipulation, analysis, and visualization.
 - Power BI - Experience in creating dashboards and reports for data-driven insights.
 - Snowflake – Experience with Snowflake for cloud-based data warehousing.
 - DSA – Knowledge of using data structures and algorithm for optimization.

PROJECTS

Stock price forecasting using machine learning

Designed a prediction model for the future value of stock traded on stock exchange for reaping profits. This project involved preprocessing large datasets, selecting relevant features, and training the model to enhance predictive accuracy, which can help investors make informed decisions and maximize potential profits.

Random password generator

Designed a tool that creates strong, unique, and complex passwords for users. The generator uses a combination of letters, numbers, symbols, and other characters to generate passwords that are difficult to guess or crack. This is designed in Python language.

Sales Data Analysis using Power BI

Developed an interactive dashboard in Power BI to analyze sales performance across different regions and products. The project involved data cleaning, transformation, and visualization to identify sales trends, peak seasons, and key performance indicators. This helped in making data-driven business decisions.
